

Benefits:

- Scavenges Nutrients
- Improves Soil Health
- Relieves Compaction
- Suppresses Weeds
- Enhances Soil Tilth

reCLAIM is a late maturing cover crop radish with a deep root system making it a great choice for scavenging nutrients. This radish grows deep into the soil profile, 30 inches or more, allowing it to “reCLAIM” nitrogen and other leached nutrients back into the root zone. The radish then decomposes and releases these nutrients making them readily available for the next cash crop.

34” deep in 8 weeks!

Seeding Information:

Method	Lbs./acre
Broadcast	10
Drilled	6 to 8
Precision	4

**A deep root system even with a medium girth sized tuber.
Picture taken at 33 days**

Management:

- Plant 4 to 10 weeks prior to the first killing frost
- reCLAIM winter kills after 3 nights of temperatures in the mid-teens
- Use full rate of Glyphosate with 1 pint of 2-4D to terminate any radishes that may survive the winter.
